Everyday low prices and free delivery on eligible orders. Autism and the Edges of the Known World Sensitivities Language and Constructed Reality In this intelligent and incisive book Olga Bogdashina explores old and new ...In doing so she shows that autism can help to illuminate our understanding of what it means to be human, and of how we develop faculties that shape our cognition, language, and behaviour. In the final chapter, she explores phenomena often associated with the paranormal – including premonitions, telepathy and déjà vu – and shows that these can largely be explained in natural terms. This was an interesting book. Unlike a lot of other autism discourse I've come across, the author focuses primarily on the different ways that people diagnosed with autism may experience the world sensorily. She strongly argues that this perception of the world is as much "reality" as the "normal" perception of the world. I appreciated her argument, and I think that it's one that we need to pay more attention to.
