

Download How To Set Cam Time On Bombardier

so today i set a raptor 660 timing. engine has to be at tdc the three dots have to be shown on the cam sprocket. Timing is set with the cam advanced. This is done by removing the starter cup and manually advancing the cam, then turning one of the 10mm screws into the hole until it bottoms against the cam back and holds it in place. I was trying to set the valve clearance on my Kazuma 90cc, and no where online does it mention what is TDC on the magneto. "Look for the mark". I just set mine. It's at three turns out and is idling nice. Had to keep taking the carb off and trying 1/2 turn at a time. It's at three turns out and is idling nice.
