

Download Mall Management System Project In Dbms

A Mall Customer can browse through the shops and choose products to place in a virtual shopping cart. The shopping cart details can be viewed and items can be removed from the cart. To proceed with the purchase, the customer is prompted to login. Also, the customer can modify personal profile information (such as phone number and shipping address) stored by the application. The customer can also view the status of any previous orders, and cancel any order that has not been shipped yet. Shopping Mall Management System Project.

Saturday, 25 July 2015 1 comment. 1. INTRODUCTION Shopping Cart is an online store that enables website owners to sell their product online.
