

# **Download Polymer Characterization Physical Property Spectroscopic And Chromatographic Methods**

EuroSciCon invites all the participants from all over the world to attend "10 th Edition of International Conference on Analytical Chemistry" during February 28 - March 01, 2019 in London, UK which includes prompt keynote presentations, Oral talks, Poster presentations and Exhibitions. ASTM's petroleum standards are instrumental in the evaluation and assessment of the physical, mechanical, rheological, thermal, and chemical properties of crude oils, lubricating grease, automobile and aviation gasoline, hydrocarbons, and other naturally occurring energy resources used for various industrial applications. The review summarizes current trends and developments in the polymerization of alkylene oxides in the last two decades since 1995, with a particular focus on the most important epoxide monomers ethylene oxide (EO), propylene oxide (PO), and butylene oxide (BO). For several decades, authors relied upon the carbonyl index to monitor the photo-oxidation of polypropylene and to account for the degradation of the mechanical properties.
